

5 WAYS TO GUARANTEE HAULER PERFORMANCE IN WINTER

1

USE FACTORY-APPROVED PARTS
All Rokbak Factory-Approved Parts have been engineered to maintain high performance and prevent unexpected downtime even in low temperatures.

2

SELECT THE RIGHT SPECIFICATIONS

Fluid heaters will make the haulers more efficient in low temperatures, and good windscreen wipers will help to maintain visibility in heavy rain or snow.

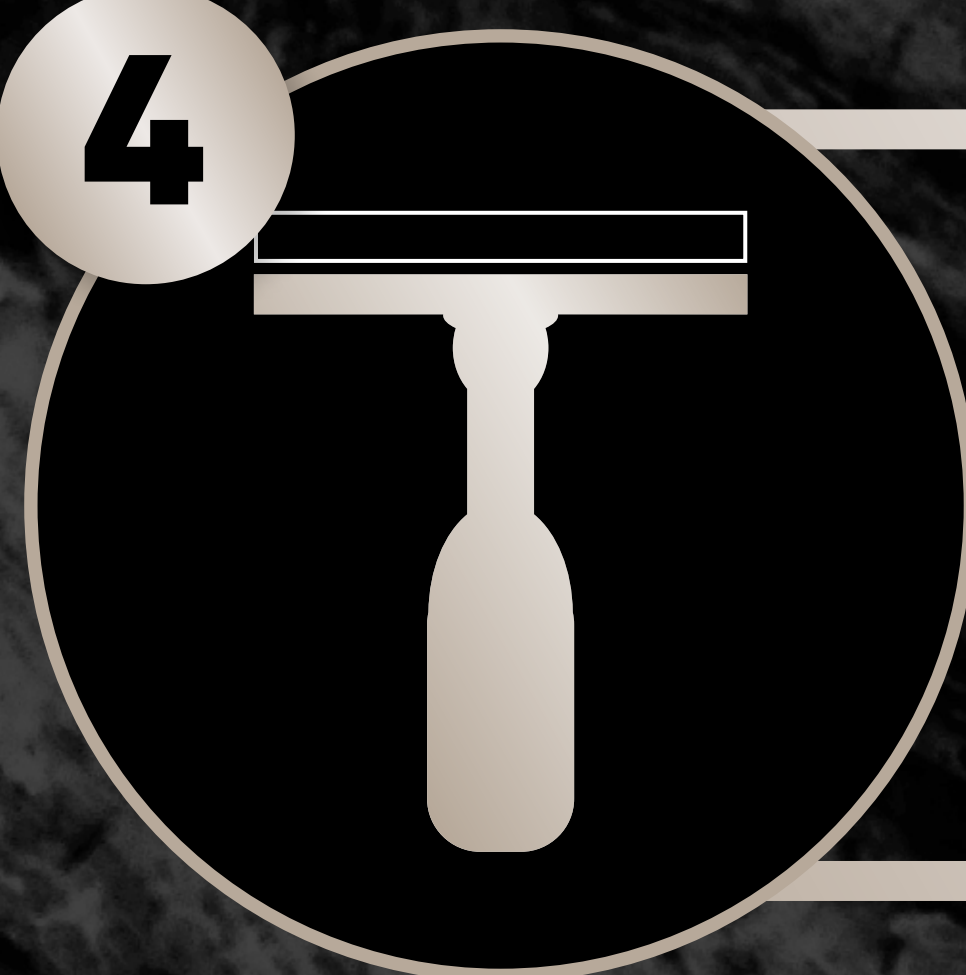

3

MAKE REGULAR INSPECTIONS

A pre-winter inspection is ideal for starting the new season productively, and daily inspections can prevent accidental wear and tear.

4

REMOVE ANY DIRT OR SALT

Dirt can freeze and become difficult to remove, while salt can contaminate and erode systems. Daily cleaning protects the body and components.

5

CORRECTLY STORE THE MACHINE

If a hauler is not being used in winter, correct storage will ensure it stays in good condition and be ready to work again in the spring.
